

Review cypressAllure project

- cyAllureRun.yml

```
- name: Deploy report
  uses: JamesIves/github-pages-deploy-action@3.1.0
  if: always()
  with:
    ACCESS_TOKEN: ${{'secrets.ACCESS_TOKEN'}}
    BRANCH: master
```

Usually a report is deployed to a non-master branch

- config/config.config.ts

```
baseUrl: 'http://automationpractice.com/index.php',
```

baseUrl must contain root address only

- login.test.ts

```
loginPage.validateLoginError('Invalid email addresssssss.')
```

spelling mistake

- myAccount.test.ts

```
import { loginPage } from "../pages/loginPage";

describe('My Account Functionality', () => {
  beforeEach(() => {
    cy.visit('https://google.com');
    //loginPage.launchApplication()
  })
  it('Sample Test', () => {
    console.log("This is a sample test")
  })
})
```

```
import is not used  
trash file with no meaningful tests
```

- users.json

```
"valid_credentials": {  
  "emailId": "testautomation@cypressstest.com",  
  "password": "Test@1234"  
},
```

snake case and camel case
